

# Soils and Forest Management

Announcing a four-part series on Soils and Forest Management. The series will review basic soil characteristics and sources of information, then dig deeper on issues related to soil and site productivity, compaction, vulnerability to seasonal harvesting, hydrology, the effect of organic matter removal on various soils, and much more.

**April 21, 2016: Symposium** reviewing the characteristics and attributes of Minnesota forest soils, potential impacts from management activities, and sources of information for office and field use. Cloquet Forestry Center.

**April 26, 2016: Field Day on Wetland Soils.** Marcell Experimental Forest and Chippewa National Forest.

**June 9, 2016: Field Day on Upland Low-quality Soils.** Brainerd area.

**September 13, 2016: Field day on Upland High-quality Soils.** Duluth area.
